AI Prompt Collection – Vol. 1

by ohneis.studio

This prompt pack is made specifically for ChatGPT with image generation enabled. All prompts are ready to use as they are – but can also be adapted and remixed for your own creative ideas.
Each section includes:

A generalized prompt structure based on three detailed examples

Suggested keywords for customization and variation

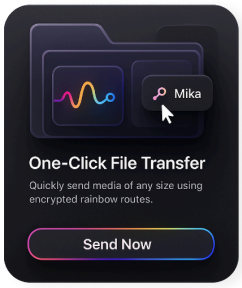
Three original prompts you can copy and use instantly

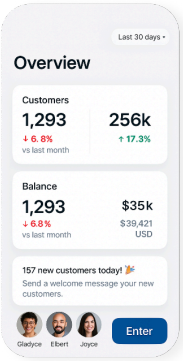
1. UI Prompts

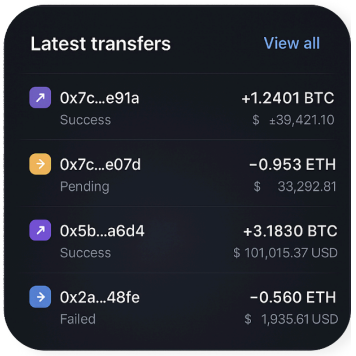
General Prompt

Design a compact, modern UI card inside a 1x1 frame. Choose a specific feature or function (e.g. file sharing, transaction list, dashboard). Describe the layout clearly (e.g. vertical card, hover states, shadows, icons), use distinct color palettes (grays, dark themes, neon accents), and define the text structure (title, subtitle, tooltips). Include interaction logic like dropdowns, profile images, metrics, or notifications. Subtle design details like gradients, radial noise, glassmorphism, or soft elevation can enhance realism. End with layout and purpose hints.

Suggested Keywords:
glassmorphic, neon accents, vertical card, crypto dashboard, hover tooltip, radial noise, transaction feed, compact UI, minimal layout, mobile-friendly







Example Prompts

Prompt 1:
A vibrant, color-mode UI card for a modern file sharing feature, set against a medium-gray background with soft lighting and subtle radial noise. The main UI element is a

semi-glassmorphic panel, shaped as a vertical card with rounded corners. A dark transparent folder icon with outlined compartments is centered in the card. One compartment contains a glowing waveform visual in rainbow gradients (magenta, yellow, cyan), while another features a hover-highlighted share icon with a multicolor gradient stroke. A small dark tooltip next to it says 'Mika' in white text.
Below the folder, white text in modern sans-serif reads: 'One-Click File Transfer', and under it, a soft-gray caption: 'Quickly send media of any size using encrypted rainbow routes.' A pill-shaped button at the bottom reads 'Send Now' and features a subtle linear rainbow border with a gray fill. The entire UI uses dynamic contrast between mid-grays and neon-like color highlights to convey precision and playful professionalism. Use the image for the layout, create it in a 1x1 frame.

Prompt 2:
A clean and modern mobile dashboard UI designed for a business insights app, viewed in portrait orientation. The screen background is light gray with smooth gradients and subtle card elevation. At the top, a segmented control labeled 'Last 30 days' appears as a dropdown in the top-right corner.
Below, a large title reads 'Overview' in bold black sans-serif.
Two key metric cards are placed side by side with slight padding between them. The first card is labeled 'Customers' and shows the number '1,293' in large black text, with a red arrow and text '↓ 6.8%' underneath, labeled 'vs last month'. The second card is labeled 'Balance' and displays '256k' with a green arrow and '+17.3%' growth note below. Both cards have a soft white fill with rounded corners and light inner shadows.
Beneath the metric section is a notification bar reading '157 new customers today!' in black text, followed by the prompt: 'Send a welcome message your new customers.' Below that, a horizontal row of circular user profile avatars is shown, each labeled with a first name such as 'Gladyce', 'Elbert', and 'Joyce'. The interface is minimalist, friendly, and optimized for quick interaction on touch devices, with a strong focus on engagement and user feedback.

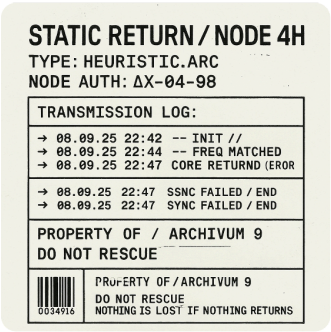
Prompt 3:
A compact UI card displayed in a 1x1 frame for displaying recent crypto wallet transactions in a dark-themed Web3 interface, adapted from a horizontal layout into a stacked vertical feed. The card background is soft black with slightly rounded corners and muted borders. At the top, white text reads 'Latest transfers' with an info icon beside it, and a small blue 'View all' link is aligned to the top-right.
The body of the card features four vertically stacked rows, each showing: a rounded icon with a diagonal arrow (up or down) inside a purple or blue square, a shortened wallet hash like '0x7c…9e1a', and a status label such as 'Success', 'Pending', or 'Failed'. Status indicators use green, orange, or gray text with corresponding dot icons. Aligned right are the crypto values in bold white ('+1.2401 BTC', '−0.953 ETH'), with a secondary line below showing the converted fiat amount in soft gray ('$39,421.10 USD'). Each row is separated by thin, semi-transparent dividers. Typography is modern, space is tight but legible, and the layout feels crisp and responsive—perfect for a mobile-ready crypto dashboard.

2. Micrographic Prompts

General Prompt

Design a 1x1 micrographic badge or diagnostic token layout. Stick to black on off-white or grayscale color schemes. Use structured, grid-based design and dense informational blocks: terminal logs, codes, tags, warnings. Layout should include monospaced or uppercase type, layered sections, framed scroll areas, and strict hierarchy. Imperfections are essential: barcode misprints, toner dust, paper folds, dot-matrix fading, or offset overlays. These prompts simulate high-density archival visuals with a fictional/technical aesthetic.

Suggested Keywords:
token badge, transmission log, security label, offset print, barcode glitch, terminal screen, dot-matrix, heuristic archive, overlay label, fold shadow



Example Prompts

Prompt 1:
Design a densely packed 1x1 diagnostic token badge. Use grid-based layout, black text on off-white. Top: “STATIC RETURN / NODE 4H” in uppercase extended font. Add file-type string:
“TYPE: HEURISTIC.ARC”
“NODE AUTH: ΔX-04-98”
Mid-section block: frame with tiny scroll text:
“TRANSMISSION LOG: → 08.09.25 22:42 — INIT // → 08.09.25 22:44 — FREQ MATCHED → 08.09.25 22:45 — CORE RETURNED (ERROR 409) → 08.09.25 22:47 — SYNC FAILED / END”
Bottom features security tags:
“PROPERTY OF / ARCHIVUM 9” “DO NOT RESCUE” “NOTHING IS LOST IF NOTHING RETURNS”
Imperfections: barcode with overprinted text, misaligned framing box, torn scan edge along lower left, dot-matrix fade, light vertical stripe haze through top half.

Prompt 2:
Design a 1x1 overlay mimicking a redirection interface label. Core text: “REDIRECT NODE_08”, inside large outlined triangle pointing right. Add:
“PASS KEY: 44–213” “JUMP SET FOR 03.21.24” “STATUS: PRE-LOCK”
Use faded red for triangle, black for text. Include tiny arrows and dotted motion path.

Imperfections: triangle outline double-printed with offset, paper looks buckled, toner powder residue along path line, faint “shadow print” of triangle repeating behind the first.

Prompt 3:
Design a gravity regulation seal in halftone print style. Title: “GRAV UNIT 93” in compressed grotesk, placed inside an oval with dot-fade texture. Background: raw white paper with diagonal measurement ticks. Include phrases like:
“CERTIFIED FOR ZONE 3-B” “MAX LOAD: 980 N” “REF MODULE: GNX.440A”
Imperfections: halftone circles offset from text, warping ink ripple on main logo, faint fold shadow in lower-left, toner spill that bleeds outward slightly, two stray dots where no marks should be.

3. Retro Logo Prompts

General Prompt

Create a retro-style vector logo reinterpretation of an existing or fictional brand. Focus on thick typography (bubble letters, geometric sans-serif), flat fills, bold outlines, and heavy drop shadows. Add sparkles, retro ornaments, or motion lines for personality. The symbol (if any) should stay recognizable but repositioned creatively. Background should always be flat beige or transparent – no gradients or 3D effects. Keep it playful, bold, and clean.

Suggested Keywords:
retro vector, drop shadow, bubble type, badge layout, sticker logo, sparkles, 80s font, comic accents, geometric sans, flat design

Example Prompts
Prompt 1:
A retro-styled vector logo for the brand “ohneis,” The word “ohneis” is the core visual focus, redrawn in ultra-bold lowercase geometric lettering, slightly softened and exaggerated, reminiscent of 90s sticker branding and 70s type-driven logos. Use solid black fills with cream outlines and a thick black drop shadow for punchy, sticker-like depth.
Scattered around the wordmark, add small retro starbursts and sparkle stars — some sharp, some round — in matching monochrome or a pop accent like mint green or faded yellow.
The composition can be loosely badge-style or horizontally aligned, but should feel vibrant, fun, and high-contrast.
Everything must remain flat, vector-based, and on a transparent background.

Prompt 2:
A retro-style vector reinterpretation of the ChatGPT logo, preserving the green knot symbol exactly as-is. The symbol is reduced and moved to the side or behind the text. The word “ChatGPT” is scaled up and redrawn in a bold, all-caps geometric sans-serif, reminiscent of 80s computing and sci-fi titles. Use a deep green for the fill and add black outlines plus a strong drop shadow for dimension. Optional accent: a bright green spark or radial burst behind the type. Layout is badge-style or staggered horizontal, always flat and clean. Background is light beige or transparent.

Prompt 3:
A retro vector reinterpretation of the Gatorade logo, keeping the original lightning bolt and bold “G” icon completely intact. Move the lightning emblem smaller and to the top or side, and make the word “GATORADE” the center of attention. Use explosive chunky bubble letters, with a mix of orange and yellow fills, outlined thick in black and layered with a heavy drop shadow. Add comic-style sparks or minimal motion lines around the text for extra energy. Layout is horizontal or circular badge. Background is light beige or transparent. Flat and clean — no gradients or textures.
